

BOOK:

The Pillars of Business Success

Tony Gattari and Shaun Mooney

Four stars

In any decent bookshop, you'll find a whole shelf (or more) of books on how to run a successful business—but you won't find many like this book.

Tony Gattari was head of Harvey Norman's computer and communications division for nine years and took its annual profits from \$12 million to \$565 million. Drawing upon this experience and his work as a corporate/business advisor, Gattari, ably assisted by Mooney, presents a whole range of business strategies.

But what's unique about *The Pillars of Business Success* is that both authors are Christians, and provide wonderful examples from the Bible of good business sense.

The book is part business guide and part workbook, as it includes many exercises that require either a written response or some action to be taken by the reader. MD
